RECRUTEMENT JEUNE DOCTEUR

Post Doc Position - Toulouse
Temporary position

Presentation of the Institute

The Centre Hospitalier Universitaire de Toulouse’s institute (Toulouse, France) is internationally-recognized for clinical research on age-related conditions. In particular, several fields of expertise/research are present, including geriatric medicine, Alzheimer’s disease (the company is the largest Alzheimer’s disease research and clinical center in France), nutrition, sarcopenia, and frailty (coordinating international scientific task forces on the topics).

The Institute conducts clinical research and trials in all these domains and coordinates large national and international studies.

The Centre Hospitalier Universitaire de Toulouse is a public university hospital in the South-West of France currently employing more than 3,000 physicians and more than 10,000 healthcare professionals.

Toulouse was selected by the French Ministry of Health and the Secretary of State for Older Adults as national center of excellence in the field of geriatrics and gerontology because gathering together the required infrastructures, expertise, and clinical care facilities. The Institute aims to federate research teams within a common structure in order to increase research activities and prevention initiatives to promote health improvements in older persons.

This structure, unique in France, includes more than 400 healthcare professionals and integrates several facilities. The institution has set in motion agreements with stakeholders all over the Midi-Pyrénées region, involving both clinical and research settings, and recruiting specifically trained clinical research personnel. This network composed by local and regional actors in the healthcare pathway for older persons allows over 30,000 older patients every year to benefit from clinical care and innovations from clinical research.

The institute is currently recruiting post-doks to be involved in the ongoing research programs. In particular, candidates should be able to enhance the institution studies through the publication of scientific articles in peer-reviewed journals.

Post-docs with PhD in a relevant discipline (e.g., epidemiology, statistics, gerontology) is preferable.

English language fluency and adequate use of a statistical software are required.

Various positions according to the candidate’s experience are available. We are especially interested in applicants having the potentialites for future independent research positions.

Posts are for full-time and fixed-term (period of one year, renewable for one year) appointments.

Applications should includes
- A brief cover letter explaining why you would like to join our Institute
- Your Curriculum Vitae including your publications list
- The pdf files of one or two full-text articles of yours
